### DETAILED ACTION

This Office action is in response to the communication filed 8-2-05.

Claims 16-24 are pending in the instant application.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 16-24 are rejected under 35 U.S.C. 102(e) as being anticipated by McCall et al.

McCall et al (USPN 6,277,634) teach chemically synthesized double stranded nucleic acid molecules between 14-24 nucleotides comprising 5' and/or 3' caps comprising inverted (deoxy)abasic moieties, phosphorothioate internucleotide linkages, 2'-O-methyl or 2'-fluoro modified nucleotides, and a target region complementary to a

Art Unit: 1635

viral or mammalian target gene, which nucleic acid molecule is in a pharmaceutically acceptable diluent (see entire document, esp. col. 5-6, 8-10 and 14).

Claims 16-22 and 24 are rejected under 35 U.S.C. 102(e) as being anticipated by Matulic-Adamic et al.

Matulic-Adamic et al (USPN 5,998,203) teach chemically synthesized double stranded nucleic acid molecules between 14-24 nucleotides comprising 5' and/or 3' caps comprising inverted (deoxy)abasic moieties, phosphorothioate internucleotide linkages, 2'-O-methyl or 2'-fluoro modified nucleotides, and a target region complementary to a mammalian target gene, which nucleic acid molecule is in a pharmaceutically acceptable diluent (see entire document, esp. the abstract, col. 3-4, figures 8-10, 13, 18, col. 8-10, claims 1, 4-7, 9, 10, 16-39 and 41).

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Art Unit: 1635

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-24 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-6 of U.S. Patent No. 6,673,611.

Although the conflicting claims are not identical, they are not patentably distinct from each other because both claimed inventions are drawn to nucleic acids comprising 5' and/or 3' caps comprising inverted (deoxy)abasic moieties, phosphorothioate internucleotide linkages, 2'-O-allyl or 2'-fluoro modified nucleotides, and a target region complementary to a target gene of interest.
